

Your Week with... Delta HLA Plus

An advanced high-water level alarm system, specifically designed for real-time tracking and monitoring of pumping stations, providing a reliable tool in your hands.

MONDAY 08:00 AM

A sump pump high-water level alarm (HLA) is used to monitor water levels within your package pumping station.

Your basement drainage system is working with no faults. No changes in pump(s) frequency, no service due, comms all fine – no flooded basement!!

WEDNESDAY 08:00 AM

You receive notification that there is a power outage to your basement drainage system.

You have no concerns as the HLA Plus has a built-in backup battery and sump pumps will continue work taking power from the installed Battery Backup*.

*Where a Battery Backup has been installed.

THURSDAY 12:30 PM

Installer/keyholders and/or interested parties who are registered to the device receive notification of a power outage.

When mains power is restored - notification is sent to all parties registered to the device as a 'users' via the Delta Pumps App.

SATURDAY 06:00 AM

High level Alarm Activated.

You receive notification that there is a High-Water Level. This indicates that more water than normal is being drained into the basement drainage system. This could be groundwater from a storm or an indication of burst mains water or potential problem with the primary pump in the pumping station at your property.

On site an alarm will be heard.

Delta Registered Pump Servicing Installer/keyholders and/or interested parties who are registered to the device receive notification.

SATURDAY 08:00 AM

Your basement drainage system is working. Your Delta Registered Pump Servicing Installer has received notification that a High-Water Level has been recorded to your device.

Depending on your service contract, your Delta Registered Pump Servicing Installer and/or interested parties may book a site visit to inspect your basement drainage system. **No flooded basement!**

Features and benefits
